FOR IMMEDIATE RELEASE

Dimetis and Aperi demonstrate full integration of OpsNGN and V-Stack for cloud-based live IP workflows at NAB Show 2019

NAB Show, LAS VEGAS, April 8, 2019 – Orchestration and OSS specialist [Dimetis](#) and [Aperi](#), the pioneer of live IP media processing, today announced that they are working together on a joint solution to create new IP-based workflow offerings for Communication Service Providers (CSPs) covering content aggregation, application orchestration, SD-WAN/NFV and more. At Aperi’s NAB Show booth (SU13302), the two companies will present a live demonstration between Dimetis’ OpsNGN and Aperi’s Media Defined Virtualization (MFV) architected for live IP workflows enabling orchestration across the IP-to-IP boundary between CSPs and media producers. The tightly integrated orchestration between Dimetis and Aperi, built around standards-based RESTful APIs, allows for real-time SMPTE 2022-2, 2022-6 and 2110 IP flow analyzing and IP boundary security to replace current baseband workflows.

The orchestration and OSS expertise provided by Dimetis and the OpsNGN platform, combined with Aperi’s proven MFV ‘app’ technology, allows service providers and content originators to reduce total cost of ownership and create efficient IP-based workflows built on SD-WAN and NFV frameworks. The paradigm shift away from fixed, CAPEX-intensive solutions towards flexible, pay-as-you-grow licensing is what customers are demanding from their technology partners.

“These are changing times, and broadcasters are looking for solutions that are powerful, yet interoperable and affordable,” said Dave Herfert, VP of Sales at Aperi. “Working closely with Dimetis to orchestrate truly native live IP video applications, especially ones that rely on network elasticity and speed, will provide our customers with enormous benefits. This enables them to improve their existing

workflows or build new greenfield sites that help them take advantage of new business models and distribution schemes.”

Kai Bechtold, Head of Global Sales and Marketing for Dimetis, added, “Together, we intend to enable the transition from dedicated hardware-dependent network designs towards open, standards-based IP networking, helping broadcasters and communication service providers gain the benefits of a software-defined and commercial off-the-shelf network migration. Combining the Dimetis OpsNGN solution with the Aperi top-tier virtualized, native live IP media platform, we can help our customers efficiently scale network provisioning faster and drive new revenue channels.”

The integrated All-IP Video Transport Solution will be demonstrated live at the Aperi Booth (SU13302) during the NAB Show, April 8-11 in Las Vegas.

About Aperi Corporation

Aperi’s revolutionary open and software-defined technology is redefining live sports, entertainment and news productions on the world’s biggest stages. With Aperi’s IP-centric and FPGA-based media platform, service providers, content owners, rights holders and broadcasters can produce high-quality content faster, more efficiently and at scale for the lowest-cost and most agile remote production.
